McAfee Client Proxy 4.1.5 Hotfix 1 Release Notes

Hotfix (GA)

Contents

Information about McAfee Client Proxy 4.1.5 Hotfix 1 release

This hotfix resolves issues related to mutual authentication, traffic redirection issue when using ethernet and alternate proxy server polling interval.

Release date — 29 Sep 2021

Release build —
- Windows 4.1.5.3
- macOS - 4.1.5.101

Note: This hotfix does not support the automatic upgrade of a pre-release software version. To upgrade to a production release of the software, you must first uninstall any pre-release versions.

Rating

The rating defines the urgency for installing this hotfix.

This release is mandatory for all environments. Failure to apply mandatory hotfixes might result in a security breach. Mandatory hotfixes resolve vulnerabilities that might affect product functionality and compromise security. You must apply these hotfixes to maintain a viable and supported product.

Resolved issues

This hotfix addresses the following customer-reported issue.

Reference	Resolution
MCP-4496	Due to proxy polling issue, McAfee Client Proxy failed to reach proxy servers to redirect traffic. This issue is now resolved. (Windows only)
MCP-4528	McAfee Client Proxy stopped redirecting when WIFI was changed to ethernet. This issue is now resolved. (Windows only)
MCP-4658	McAfee Client Proxy auto policy download no longer fails on the secure channel after updating HA proxy on the Cloud proxies.

For a list of current known issues, see McAfee Client Proxy Known Issues (KB83131).
